There is a general scientific consensus that the last Earth's most extreme temperature has fluctuated between about 1 degree Celsius for the last 2000 yrs. So 2 degrees or even 8 degrees would be a comparatively enormous change!

Lasceremo petrolio sotto terra

I 2 tonnellate all'anno di CO₂

- European Environment Agency, “Environmental pressures from European consumption and production”:
- 3/4 delle emissioni sono indirette (materiali e beni prodotti altrove).
- Ogni europeo è causa di emissioni dirette e indirette pari a 12 tonnellate di CO₂ all'anno.

Organico e compostaggio

- Una Azione individuale e collettiva:
- la differenziata dell'organico
- e la compostiera da giardino

COMMUNITY GENERALE

Differenzio tutti gli scarti organici di cucina e balcone

Impegnati a separare bene tutti gli avanzi dei tuoi piatti e gli scarti verdi del tuo balcone. Dei due chili a testa di rifiuti organici che produci alla settimana, ben più della metà possono essere recuperati per produrre compost e biogas.

La conversione ecologica potrà affermarsi solo se apparirà socialmente desiderabile (Alex Langer)
